1 *Branding*
Logo and header branding for the system.

Navigation
If necessary, we will include mobile ready navigation.

2 *Create New*
Create a new Element, Metadata Template or Runtime instance.

3

4 *Recent*
Shows the three most recent Elements, Metadata Templates and Runs.

5 *See All*
This will bring up a grid showing all Elements; Metadata Templates; or Runtimes. This will be mocked up upon approval by CEDAR.
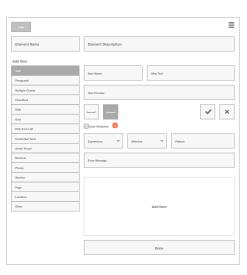

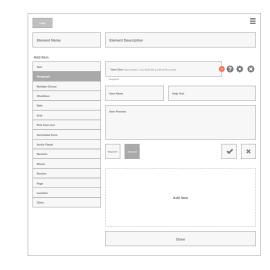

6 *Edit/Delete*
Edit or delete an Element, Metadata Template or runtime.

Interaction Specifications

1 *Template Name*
Enter the Template Name here. This will show up on the Dashboard and in the Metadata Template Runtime.

2 *Template Description*
Enter the Template Description here. This will show up on the Dashboard and in the Metadata Template Runtime.

3 *Add Element*
This will list all Elements available for this Template.

4 *New Element*
In the case that a user needs an Element not yet created, this adds an easy button to get into the Element creator interface.

5 *Add Element*
A visual cue for the user to add an Element to the template.

6 *Preview*
This shows the Element in the template layout. Users can view Help Text, edit or delete the Element.
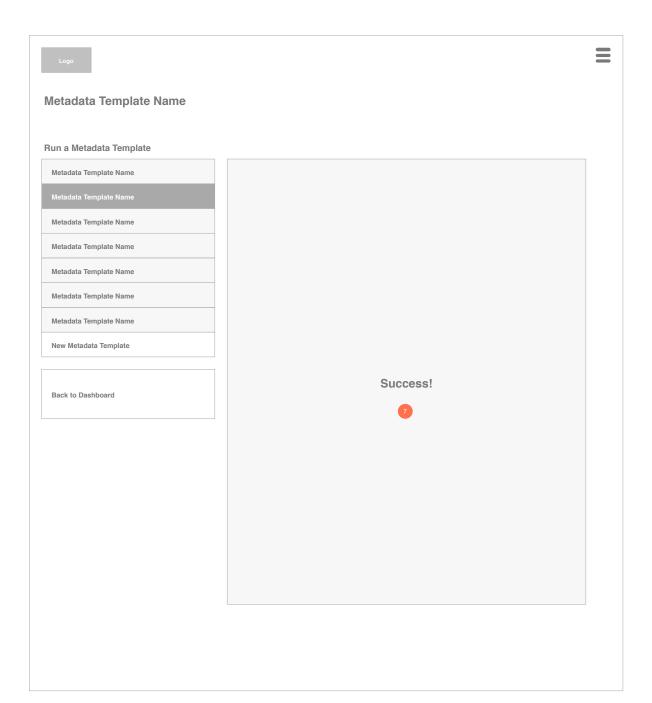

7 *Done*
Clicking Done will bring the user back to the Dashboard.

Note: Ideally this template will be getting saved as each Element is added, eliminating the chance for loss of work.

Interaction Specifications

1 **Run a Metadata Template**
A list of templates to choose from to run. Clicking one of these loads the template in the right column.

2 **New Metadata Template**
In the case that the user needs a new template not listed, this button brings them directly to the Metadata Template Creator to easily build a new one.

3 **Back to Dashboard**
Brings the user back to the Dashboard. This is necessary because a user can run as many templates as they would like from this screen, so they need a way to get back to the starting point of the system.

4 **Template Fields**
This shows the Elements created in Metadata Template Creator, along with icon cues that data has been correctly entered.

5 **Help Text Icon**
This can be clicked for help text and once data has been correctly entered can change to the success icon.

6 **Error**
Shows the data error icon and gives a reason for the error as well as steps to correct it.

7 **Run**
Runs the template. After a successful run, the page will show a success screen, and the user can choose another Metadata Template to run.

8 **Cancel**
Cancels this Metadata Template, removes it from the screen and allows a user to select a new one.
